

**Assessment of the significance of the impact of
development on historic landscape areas
(ASIDOHL)**

Land at Pentywyn Road, Llanrhos

January 2025

Client	Anwyl Homes Ltd	
Site name	Land at Pentywyn Road, Llanrhos	
Report type	ASIDOHL	
Report reference	P00287.02A	
Report date	14 January 2025	
Prepared by	Helena Kelly, BSc, MIFA	
	Heritage Archaeology Harborough Innovation Centre Airfield Business Park, Leicester Rd, Market Harborough LE16 7WB	
Revision history	V.A	Client draft

Summary

Heritage Archaeology Ltd was commissioned by Anwyl Homes to provide an ASIDOHL for land at Pentywyn Road, Llanrhos as part of the Conwy Local Development Plan Review.

ASIDOHL is a staged process for the assessment of the significance of the impact of development on historic landscape areas on the register of landscapes of historic interest in Wales.

The site considered by this assessment is within the Creuddyn a Conwy (Creuddyn and Arllechwedd) Registered Historic Landscape (ref. HLW (Gw) 5), Area 6 Creuddyn (PRN 15803). The land is within Historic Landscape Character Area CNWHL057 Bryn Pydew.

The site comprises agricultural fields, the field pattern has been significantly modified through boundary loss and changes to the road pattern, compared to that shown on the tithe map of 1846. Modern housing lies to the north of the site, the office and research facility at Ty'n-y-Coed is to the south and a caravan park is to the west. Key characteristics of the historic landscape area include designed landscapes, substantial farmsteads and limestone walls. These are not present within or close to the site.

Crynodeb

Comisiynwyd Heritage Archaeology Cyf gan Anwyl Homes i ddarparu ASIDOHL ar gyfer tir yn Ffordd Pentywyn, Llanrhos fel rhan o Adolygiad Cynllun Datblygu Lleol Conwy.

Mae ASIDOHL yn broses fesul cam ar gyfer asesu arwyddocâd effaith datblygiad ar ardaloedd tirwedd hanesyddol ar y gofrestr tirweddau o ddiddordeb hanesyddol yng Nghymru.

Mae'r safle a ystyriwyd gan yr asesiad hwn o fewn Tirwedd Hanesyddol Gofrestredig Creuddyn a Chonwy (Cyf. HLW (Gw) 5), Ardal 6 Creuddyn (PRN 15803). Mae'r tir o fewn Ardal Cymeriad Tirwedd Hanesyddol CNWHL057 Bryn Pydew.

Mae'r safle'n cynnwys caeau amaethyddol, mae patrwm y caeau wedi'i addasu'n sylweddol trwy golli ffiniau a newidiadau i batrwm y ffordd, o'i gymharu â'r hyn a ddangosir ar fap degwm 1846. Mae tai modern i'r gogledd o'r safle, mae'r swyddfa a'r cyfleuster ymchwil yn Nhŷ'n-y-Coed i'r de ac mae maes carafanau i'r gorllewin. Mae nodweddion allweddol ardal y dirwedd hanesyddol yn cynnwys tirweddau wedi'u dylunio, ffermydd sylweddol a waliau calchfaen. Nid yw'r rhain yn bresennol o fewn nac yn agos at y safle.

1 Stage One: Contextual Information

Introduction

- 1.1. Heritage Archaeology has been appointed to provide an ASIDOHL for land at Pentywyn Road as part of the Conwy Local Development Plan Review.
- 1.2. This ASIDOHL has been prepared by Helena Kelly, BSc. MCIfA, the author has experience in assessing historic landscape character (having been on the steering group for the Cumbria Historic Landscape Characterisation project) and of working on large scale infrastructure projects in Wales (including the South Wales Gas Pipeline reinforcement project and Bretton Hall Solar Farm).

Site location

- 1.3. The site is located to the west of Pentywyn Road, Llanrhos, Llandudno (hereafter 'the site'). The site is located at National Grid Reference SH79137981, the closest post code is LL30 1SS. The local authority is Conwy County Council, who are advised on heritage matters by Gwynedd Archaeological Planning Service (GAPS), part of Heneb: The Trust for Welsh Archaeology.

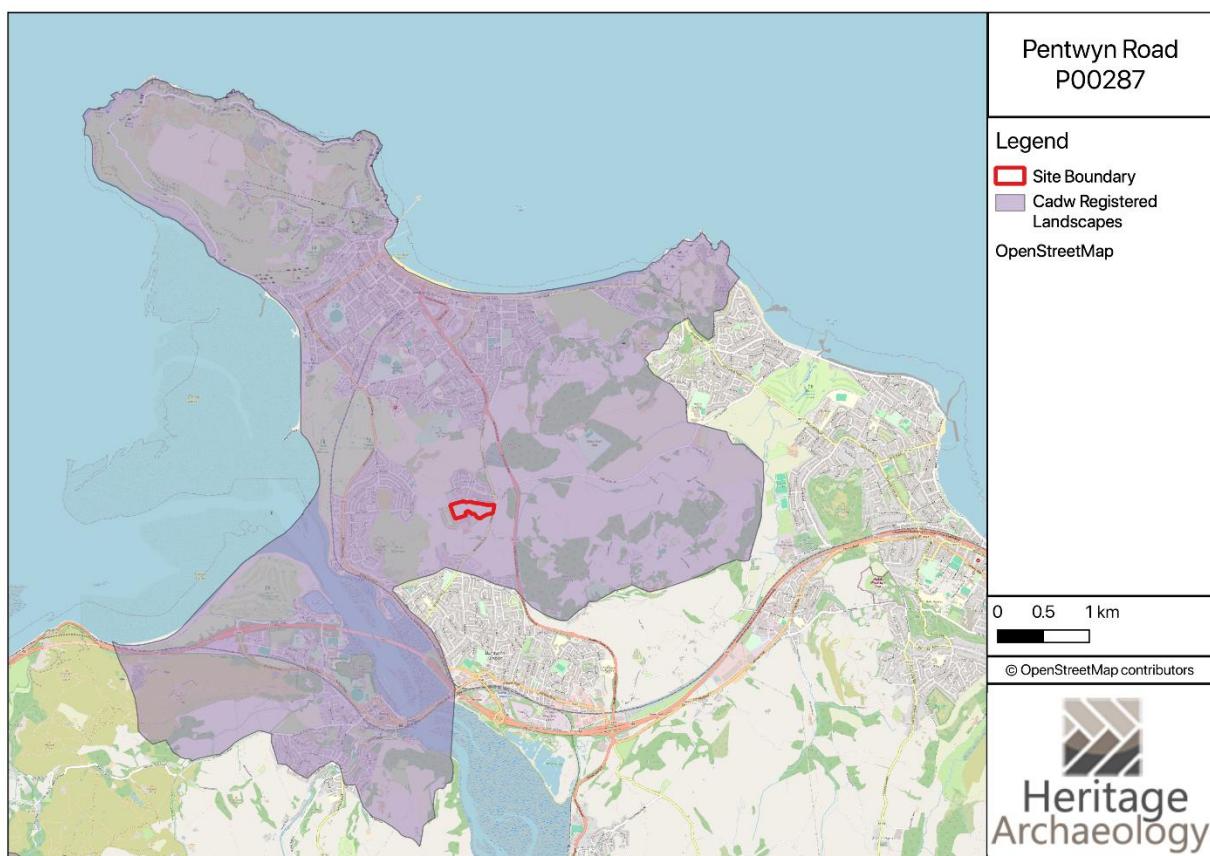

Figure 1: Site Location and Registered Landscape area

Aims of the ASIDOHL

- 1.4. The site is within the Creuddyn a Conwy (Creuddyn and Arllechwedd) Registered Historic Landscape (ref. HLW (Gw) 5), Area 6 Creuddyn (PRN 15803). Consequently, Conwy Council has recommended that an ASIDOHL is needed for the site prior to deposit of the Replacement Local Development Plan. ASIDOHL is a staged process for the assessment of the significance of the impact of development on historic landscape areas on the register of landscapes of historic interest in Wales.

Assumptions and limitations

- 1.5. The data sources used combined with site visits provide a high level of confidence in the ASIDOHL.

Planning context

Legislation

Historic Environment (Wales) Act 2023

- 1.6. Section 192 sets out that the Welsh Ministers must maintain a register of parks and gardens in Wales. Section 193 carries the same requirement to maintain a list of historic place names in Wales. Section 194 requires the Welsh Ministers to maintain a historic environment record for every local authority area. Sub-section (f) notes that where a public authority maintains a list of historic landscapes in Wales, details of every historic landscape in the local authority's area is included in the list [the HER].

Planning Policy Wales, Edition 12, Welsh Government, February 2024

- 1.7. Paragraph 6.1.5 of Planning Policy Wales (PPW) identifies that "*The planning system must take into account the Welsh Government's objectives to protect, conserve, promote and enhance the historic environment as a resource for the general well-being of present and future generations.*".
- 1.8. Paragraph 6.1.6 provides the Welsh Government's specific objectives for the historic environment, which includes "protect areas on the register of historic landscape in Wales".
- 1.9. Paragraphs 6.1.20 – 6.1.21 provide policies specific to historic landscapes, including that "An assessment of development on a historic landscape may be required if it is proposed within a registered historic landscape or its setting and there is potential for conflict with development plan policy."

Best practice and guidance

- 1.10. The following guidance documents have been referenced in preparing this report.
 - Guide to Good Practice on using The Register of Landscapes of Historic Interest in Wales in the Planning and Development Process Revised (2nd) Edition, Cadw, CCW and WAG, 2007

- Technical Advice Note 24 (TAN24): The Historic Environment, Welsh Government, 2017; and
- Conservation Principles; Policy for the Sustainable Management of the Historic Environment in Wales, Welsh Assembly Government, 2011.

1.11. The best-practice guidance "Conservation Principles" provides a framework of heritage values that can be used in assessing heritage significance, these are;

- Evidential value: the archaeological interest that a historic asset can hold, or potentially hold; evidence of past human activity that can be revealed through investigation;
- Historical value: the way in which a historic asset can provide information about past people, events and aspects of life, this can be illustrative (e.g. an example of a historic period or event) or associative (e.g. associated with a historic person or event);
- Aesthetic value: This relates to architectural and artistic heritage interest, derived from a contemporary appreciation of the asset's aesthetics; and
- Communal value: This derives from the meanings that an historic asset has for the people who relate to it in terms of its symbolic or commemorative interest.

Method of assessment

1.12. The following data sources were consulted in compiling this report:

- *Historic Wales* map enabled portal for historic environment information in Wales, for Cadw data on designated historic assets;
- *Coflein* the online database for the National Monuments Record of Wales (NMRW);
- *LANDMAP* the all-Wales landscape resource containing information on historic landscape characterisation;
- GAPS Historic Environment Record (HER);
- Conwy County Council local plan information (including conservation areas);
- Historic Ordnance Survey mapping; and
- Local and national archive data available online (a list of websites and other sources used is provided in Section 7, below).

1.13. A study area of 1km was used to obtain baseline data for this report (agreed in consultation with Heneb: GAPS).

Determining the level of effect

1.14. The method used in this assessment is as set out in "Guide to good practice on using the Register of Landscape of Historic Interest in Wales in the planning and development process, revised 2nd edition (CCW, Cadw and WAG, 2007)". The Technical Annex to that document provides the method for the five stages of the ASIDOHL assessment.

The Site context and historic background

- 1.15. The site is within an area of sandstone and mudstone formations overlain by till. The site is to the north of the mouth of the River Conwy within a coastal lowland area, with Great Orme and Little Orme Head rising to the north of Llandudno and the limestone ridge of Bryn Maelgwyn, Coed Gaer and Nant y Gamar to the east, Deganwy is to the south west.
- 1.16. Prehistoric activity is evident in the area from the Palaeolithic period. Flint finds from the caves in the limestone cliff to the north of the site, below Nant-y-Gamar, demonstrate that these rock shelters were being used by what is likely to have been a nomadic community, using the area for seasonal hunting. It is likely that the area was favourable for this, with the higher land of the limestone ridge and Little and Great Orme providing a secure location for temporary settlement activity, while the coastal location provided a rich source of food. Examples of prehistoric cave occupation sites include the scheduled monuments at Ogof Pant-y-Wennol and Ogof Tan-y-Brym.
- 1.17. The Neolithic period saw the establishment of more settled farming communities. Later prehistoric activity is also well recorded on the upland areas of Great and Little Orme, and Great Orme appears to have held some ritual significance, with a standing stone and stone avenue recorded on its summit. Flint finds from Llandudno, possible burial chambers at Maingc y Gynhadledd and a hut circle at Mynydd Pant provide further evidence for possible Neolithic activity in the area.
- 1.18. The Bronze Age was a period of further technological developments and changes in ritual monuments, one of the most prevalent being the round barrow. The copper mines on Great Orme are believed to be Bronze Age in origin. A barrow (no longer extant) and Bronze Age find spots are recorded within the wider area.
- 1.19. Nationally, evidence from the Iron Age period suggests more organised social groupings, with hilltop enclosures (hillforts) potentially having been used as higher-status settlement sites. The Iron Age hillforts Pen-y-Dinas Camp on Great Orme and Bryn Euryn Camp, to the east of the site, provide local examples of this monument type. Further evidence for Iron Age activity in the area also includes a hut circle site at Coed Gaer, to the east of the site.
- 1.20. The Romano-British period began in Wales in AD48, and Roman occupation continued until the region was abandoned by Roman military and administrative support in around AD383. Roman Chester (Deva) is likely to have been established in the early period of Roman occupation, originally as a fort built as a base for campaigns against the *Deceangli* in North Wales. The Roman campaign reached the area around Llandudno with limited resistance evident in the archaeological record, and evidence for Roman settlement sites in the area emerging from the 1st century. The copper mines on Great Orme may have been in use during the Roman period. Two large Roman coin hoards, a hoard of copper alloy objects found by metal detector on the Little Orme, and the find of a Roman vase attest to Roman activity in the area.

1.21. Deganwy Castle, to the south west of the site, is a 13th-century castle built to control the crossing of the Conwy River. There is evidence that the castle site was occupied during the Roman and early medieval periods. It had an important relationship with Conwy Castle on the opposite side of the river, and also with Bryniau Tower to the north. Bryniau Tower is documented from the 17th century but it could be earlier and is associated with Deganwy Castle, serving as a coastal watchtower with views over Conwy Bay and towards the church at Llandrillo yn Rhos, to the east.

1.22. The Church of St Hilary in Llanrhos (Eglwys-Rhos parish church) dates originally to the medieval period. An inscribed stone in the church, reported as having been found in the highway between Bodafon and Rhiw Leding dates from the 5th or 6th century and it is possible that there was an early medieval settlement at Llanrhos. The medieval village appears to have been focused around the church with outlying farmsteads within the surrounding area. Maes Dolau, a farmstead immediately adjacent to the western boundary of the site, is shown on the tithe map and could have earlier post medieval origins.

1.23. Gloddaeth Hall (St David's College) dates to the 16th century and has been owned by the Mostyn family since the 15th century, so may be the site of an earlier building. The current house was extended in the 17th, 18th and 19th century and is set within a grade I listed historic park and garden dated from the late 17th and early 18th century.

1.24. The site is depicted on historic mapping (discussed further below) as enclosed farmland to the south of Llanrhos, and the site appears to have been in agricultural use throughout the post medieval period and was likely to have been originally enclosed before the early 19th century.

The site on historic mapping

1.25. The Tithe Apportionment for the parish of Eglwysrhos in the County of Carnarvonshire (dated 1846) records the land owner of the fields within the site as John Lloyd Jones, Esq. and the land occupier as John Jones. The farmhouse and steading at Maes Dolau was in the same ownership. The recorded field names were as follows:

- 214 – Tanyr ardd (garden field)
- 215 – Cae eithin (gorse field)
- 219 – Cae Pelment
- 220 – Cae Llwyd (grey field)
- 221 – Cae Llwyn (bush field)

Figure 2: Tithe map for Eglwysrhos, 1846

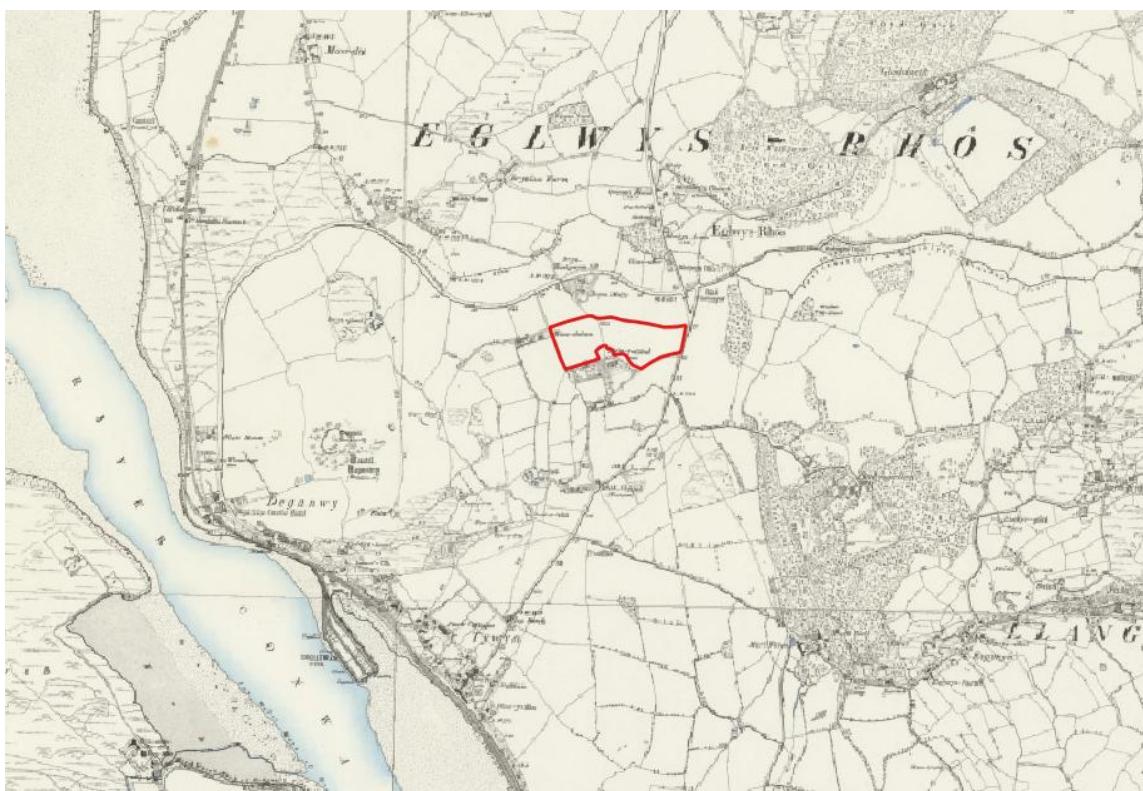

Figure 3: Ordnance Survey County Series, Caernarvonshire, 1888, 1:10,560 (reproduced with permission of the National Library of Scotland)

1.26. The first edition Ordnance Survey map shows the site with Bryn Mair constructed to the north and Ty'n-y-Coed to the south. A stone and well are depicted although neither is currently extant. The field pattern and road alignments had also been modified between the tithe map and first edition Ordnance Survey mapping. The settlements at Deganwy and Llandudno were beginning to develop by the later 19th century and are depicted on the later mapping.

1.27. By the mid-20th century suburban development stretching to the south of Llandudno was beginning to include areas around Llanrhos village and the site.

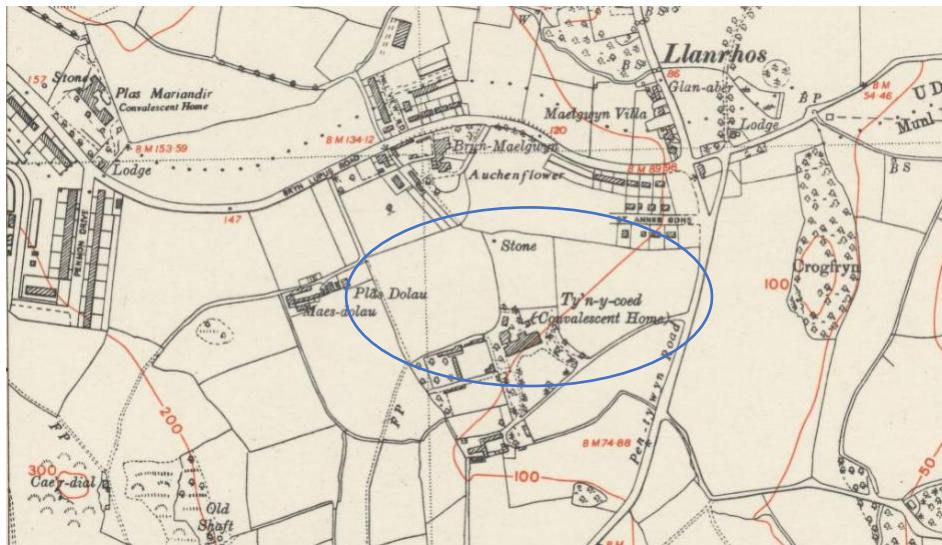

Figure 4: Ordnance Survey County Series, Caernarvonshire, 1953, 1:10,560 (reproduced with permission of the National Library of Scotland)

2 Stage Two: Assessment of direct, physical impacts of development

- 2.1. The site is within the Creuddyn a Conwy (Creuddyn and Arllechwedd) Registered Historic Landscape (ref. HLW (Gw) 5) and the Creuddyn Historic Landscape Area (Creuddyn and Arllechwedd – Area 6 Creuddyn PRN 15803).

Creuddyn Historic Landscape Area

Historical Background

An extensive area dominated by parkland and pasture, defined to the west by the urban areas of Deganwy and Llandudno Junction (area 5), to the north by the urban development of Llandudno (area 2), and the higher ground of the Little Orme and Nant y Gamar (area 3), to the east by Penrhyn Bay (area 23). The Bryn Pydew ridge (area 22) intrudes into the area.

An area rich in mythological associations, particularly the story of Taliesin and Maelgwn Gwynedd, who are traditionally connected with the Roman and post-Roman at Deganwy, consisting of two precipitous hillocks and the saddle between them. This formed the site of Deganwy castle, built by Robert of Rhuddlan c. 1080. The hill was held alternately by the Welsh and the Anglo-Normans until 1263, and part was granted to the Cistercians of Aberconwy.

From the late Medieval period, the area was dominated by the Mostyn family, whose seat lay at Gloddaeth, which lies within the area. The Mostyns also owned Bodysgallen, and they were to be instrumental in the development of Llandudno in the nineteenth century. Lesser families included the recusant Pughs of Penrhyn Creuddyn, who sheltered missionary priests. Gloddaeth dates in part from the sixteenth century, and is now a boarding school.

There was some shale quarrying at Pabo from 1911 to 1932.

Key historic landscape characteristics

- *Parkland, gentry houses, substantial farmsteads, limestone walls*
- *The area is dominated by Gloddaeth, formerly the seat of the Mostyns, now a boarding school, and the substantial farms associated with it. Though Gloddaeth is the only landed seat within the area, Bodysgallen, Penrhyn and Marl are all within a mile of it. The churches of Eglwys Rhos and Llangystennin are both ancient foundations.*
- *A marked feature of the landscape is the stone-built watch-tower, believed to date from the seventeenth century, at Bryniau.*

- *The only pre-twentieth century nucleated community is at Glanwydden, which consists of a public house and a cluster of houses around a cross-roads. The nearby windmill dates from 1704.*

Scheduled monuments

2.2. There are no scheduled monuments within or immediately adjacent to the site. There are two scheduled monuments within 1km:

- CN201 Bryniau Tower (also grade II listed, reference 5781)
- CN016 Deganwy Castle (also grade II* listed, reference 3365)

2.3. Bryniau Tower is a stone watch tower, documented from the 17th century but with potentially earlier origins. Other similar features date, however, from the 17th century and were built as watch towers to warn of threats of attack from the sea. Bryniau Tower has intervisibility with Deganwy Castle, and beyond that to Conwy Castle and may also have been associated with them, as a look-out. It lies to the north west of the site on a hill, with views in all directions. The site does not lie within the views from Bryniau Tower towards Deganwy or Conwy, or in views towards the coast at Llandudno. It is separated from the tower by modern development at Llanrhos.

2.4. Deganwy Castle may have been defended from the early medieval period, but the masonry remains of the castle date from the 13th century. The castle was held by the Welsh and English during the 11th – 13th centuries. In 1283 Edward II took control of the area and built a new castle at Conwy, rather than rebuilding or maintaining Deganwy. It lies to the south west of the site and is separated from it by a caravan park, although the topography limits direct views between the site and Deganwy Castle.

Listed buildings

2.5. There are no listed buildings within the site. There are 51 listed buildings within 1km. The closest listed building is Ty'n-y-Coed (grade II listed, reference 3331), a house built in 1878 for Mr Davis a Liverpool timber merchant and purchased in 1891 by the Birmingham Hospital Saturday Fund for use as a convalescent home. In 1971 it became a research institute with offices and laboratories. Modern extensions and structures associated with this lie between the listed building and the site, and the grounds of Ty'n-y-Coed are enclosed by mature trees along its northern boundary (the boundary to the site).

Registered parks and gardens

2.6. Gloddaeth Park (Grade I registered park and garden, reference PGW(Gd)6(CON)) is nearly 1km to the north east of the site. The summary description in the register is as follows: *Gloddaeth is registered at grade I for its well-preserved terraced gardens and formal canal dating to the seventeenth century onwards; extensive eighteenth-century plantations and parkland, including the possible site of a large maze; and, the survival of an early eighteenth-century plantation laid out with formal rides radiating from a central statue, which is of exceptional interest. The registered park and garden shares important group value with grade I listed Gloddaeth Hall (LB: 3411) and the associated estate lodges, outbuildings and*

garden structures. Gloddaeth has important historical associations as the ancestral seat of the Mostyn family.

- 2.7. Significant Views: From the south front and terraces overlooking the garden, park and countryside beyond. It is likely that near and distant views were intended in the layout of the walks and rides in the woodland.
- 2.8. Bodysgallen (Grade I registered park and garden, reference PGW(Gd)7(CON)) is over 0.5km to the south east of the site. It includes formal terraced gardens, walled, rose and kitchen gardens, and a park with woods. The list description notes that "*Bodysgallen Hall occupies an elevated site with good views on the east side of the Conwy estuary, near Llandudno Junction. It is registered at grade I for its exceptional terraced and walled gardens which lie on several levels and have early origins; its long terrace walk giving superb views.*
- 2.9. Significant Views: - *The terrace walk was positioned to take advantage of views east [sic – Conwy is to the west] over Conwy and the river estuary. Within the present kitchen garden there is a path from which an excellent view of the house and terraces is obtained.*

Non-designated historic assets

- 2.10. There are no non-designated historic assets within the site.
- 2.11. Non-designated historic assets within the 1km area of search are set out in the gazetteer and figure at Appendix A, in summary they comprise:
 - Prehistoric flint findspots, including Mesolithic and Bronze Age implements;
 - Roman findspots;
 - A coin hoard and Inscribed Stone of early medieval date;
 - Medieval townships, farmsteads, house sites, ridge and furrow and field systems;
 - Post medieval activity including buildings and landscape features;
 - War memorials, an aircraft crash site and a convalescent home of 20th century date; and
 - Assets attributed as undated or multiperiod, including the Creuddyn and Llandudno Historic Landscape Areas.

- 2.12. The farmstead at Maes Dolau, shown on historic mapping to the west of the site, is now incorporated into the caravan park and retains few historic elements. It is not recorded by the Heneb historic environment record or included in the National Monuments Record for Wales.

Landmap historic landscape areas

- 2.13. The site is within the Landmap historic landscape area 'Bryn Pydew'. The Bryn Pydew area summary description is as follows:

- *A saddle of hill land lying to landward of the Great Orme headland and edged by the Afon Ganol and its minor tributaries. It is characterized by a pattern of mixed irregular hedged fields and areas of woodland - particularly around the two summits of Bryn Pydew and Mynydd Pant. It is now encircled on all but its seaward side by the urban sprawl of Llandudno, Llandudno Junction and Colwyn Bay, and it in turn encircles the two designed landscapes of Gloddaeth and Bodysgallen & Coed Marl. The area has a scatter of farms and houses, but its only significant settlement is the straggling village of Bryn Pydew which runs along the spine of the hill. The area is notable for two Neolithic chambered tombs and a number of prehistoric and Roman finds and settlements (including occupied caves), as well as the remains of the medieval Deganwy Castle.*

Direct physical impacts

Absolute

2.14. The total area of the Creuddyn Historic Landscape Area is 780 hectares. The site covers a total area of approximately six hectares, equating to 0.77% of the historic landscape character area. Therefore the absolute direct impact is Very Slight.

ASIDOHL2 STAGE 2: GRADES OF DIRECT PHYSICAL IMPACTS

75–100% permanently lost or removed Very Severe;
50–74% permanently lost or removed Severe;
30–49% permanently lost or removed Considerable;
15–29% permanently lost or removed Moderate;
5–14% permanently lost or removed Slight;
0–4% permanently lost or removed Very Slight.

Relative

2.15. None of the designated historic assets within the baseline data described above are physically impacted.

2.16. None of the recorded non-designated historic assets within the baseline data described above are physically impacted.

2.17. The development would result in the loss of agricultural land within the historic landscape character area. The site lies within an area of urban fringe and the land is bound to the north by modern development, to the east is the Maes Dolau Farm Caravan Park and to the south the CCG Robertsons Research facility. The field pattern was modified by a significant degree of boundary loss in the late 19th century and the road pattern reorganised

2.18. The intrinsic importance category of the historic landscape features that survive within the site is Category D – Minor and Damaged Sites.

Category D Minor and Damaged Sites / Features

This category includes sites / features which are of minor importance or so badly damaged that too little remains to justify their inclusion in a higher category. Rapid recording, either before or during destruction, is usually sufficient for this category of site.

2.19. The extrinsic importance of the historic landscape features that survive within the site (the importance in landscape terms) is **Low**. The landscape character of the site makes a positive contribution to the historic landscape character area, but that is limited by modifications to the field pattern and the lack of any associated features within the site.

2.20. None of the key components of the historic landscape character area are evident within the site and the site does not include any other historic assets, related to the historic landscape character area or otherwise. The site therefore makes a limited positive contribution to the character of the historic landscape area as a whole. The loss of the landscape components that survive within the site would result in a **very slightly reduced** experience of the heritage value of the historic landscape area.

Overall assessment of direct physical impacts

Absolute loss		<i>Magnitude</i>	<i>Score:</i>		
% of HLCA loss	0.77%	Very Slight	1		
Relative loss	<i>Category</i>	<i>Magnitude</i>	<i>Landscape value</i>	<i>Landscape value effect</i>	<i>Sum</i>
Loss of modified post medieval field pattern	D - 1	Very Slight - 1	Low - 1	Very slightly reduced - 1	4
No. of elements 1	Average Score 1/4 = 4		Final overall score 1+4 = 5		
Overall magnitude of direct physical impact: Slight					

2.21. The direct physical impact of the development of the site on the Creuddyn Historic Landscape Area results score of 5 which relates to an impact of slight magnitude.

ASIDOHL2 STAGE 2: OVERALL MAGNITUDE OF DIRECT PHYSICAL IMPACTS	
SCORE	GRADING
24–28	Very Severe
19–23	Severe
14–18	Considerable
9–13	Moderate
4–8	Slight
0–3	Very Slight

3 Stage Three: Assessment of indirect impacts of development

3.1. No indirect physical impacts are anticipated in relation to the historic landscape area. The surrounding land would continue to be part of the farming land or urban fringe, as currently experienced.

Indirect physical impacts	Category	Magnitude	Sum
Creuddyn Historic Landscape Area Loss of modified post medieval field pattern	D - 1	Very slight - 1	2

3.2. Indirect (non-physical) visual impacts could occur as a result, for example, of increased urbanisation or interruption of sightlines, views or vistas. Key receptors for these impacts within the vicinity of the site are views between the Scheduled Monuments of Deganwy Castle and Bryniau Tower, the setting of Ty'n-y-Coed and views from Bodysgallen Hall Registered Park and Garden. All other designated and non-designated historic assets within the study area lack intervisibility with the site and the development of the site would not be capable of impacting their heritage value, or the contribution that value makes to the interest of the historic landscape character areas.

3.3. Bodysgallen Park (grade I registered historic park and garden) occupies a large area of formal gardens, park and woodland. The site is to the north east of the registered area and separated from it by the A470 and B5115. A large area of mature woodland prevents any intervisibility between the park and the site and at this point the site is a small element of the wider surrounding landscape. While the immediately surrounding agricultural landscapes characterises the setting of the parkland as once part of a country house set within agricultural land, the site itself is not within this setting given the distance of separation and intervening modern infrastructure. Key views from the parkland are to the south west and do not include the site. The change of use of the site from agriculture to housing would have a neutral effect on Bodysgallen Park.

3.4. The grade II listed building of Ty'n-y-Coed is to the south of the site. It is separated from it by a belt of mature trees. These appear to have been planted when the house was built, or soon after, and visually screen the adjacent agricultural land from the formal gardens and house. The site is within the setting of the asset but does not make any particular contribution to appreciating its heritage value. Also, there have been significant alterations and extensions to the building at Ty'n-y-Coed since its original construction including to the rear of the building, between the historic original house and the site. The development of the site would not impact the heritage value of Ty'n-y-Coed.

3.5. Bryniau Tower (scheduled monument and grade II listed) is to the north of the site and allowed for views towards the coast, Conwy Bay, Conwy Castle and Deganwy Castle. The site does not lie within any of these views and lies to the south of mid-20th century and later residential development at Llanrhos and would be viewed within that context. The development of the site would result in a very slight, barely perceptible, change to views from the tower and would not affect any key views that contribute to its heritage interest.

3.6. Deganwy Castle (scheduled monument and grade II* listed) is to the south west of the site. The extent of the monument is separated from the site by the Maes Dolau Farm Caravan Park. The topography also prevents the site from being visible from Deganwy Castle. Development within the site would not be visible from Deganwy Castle and would not affect its heritage interest.

Indirect visual impacts	<i>Category</i>	<i>Magnitude</i>	<i>Sum</i>
Grade I Registered Park and Garden, Bodysgallen Park	A - 4	None	4
Grade II Listed Building, Ty'n-y-Coed	B - 3	None	4
Bryniau Tower	A - 4	Very slight – 1	5
Deganwy Castle	A - 4	None	4
Development form	3.75	Very slight – 1	4.75
Development appearance	3.75	Very slight – 1	4.75

Overall assessment of indirect impacts

Average Indirect Physical Impact score 2

Average Indirect Visual Impact score 4

Total score 6

Overall magnitude of indirect impact: *Slight*

3.7. The indirect impact of the development of the site on the Creuddyn Historic Landscape Areas, and the component parts assessed, results in a score of 6 which relates to an impact of ***slight*** magnitude.

ASIDOHL2 STAGE 2: OVERALL MAGNITUDE OF INDIRECT IMPACTS

SCORE	GRADING
24–28	Very Severe
19–23	Severe
14–18	Considerable
9–13	Moderate
4–8	Slight
0–3	Very Slight

4 Stage Four: Evaluation of relative importance

4.1. The following provides an assessment of the relative importance of the assessed parts of the historic character areas to the whole of the character areas affected, to the historic landscape area as a whole, and then also to the national context.

4.2. The overall value of the affected historic landscape areas, using the below cumulative scale set out in the guidance, is moderate.

4.3. However, the site represents only a very small proportion of the Creuddyn Historic Landscape Area. It retains a small degree of the 19th century or earlier field pattern although that has been significantly modified by boundary loss, changes to the road layout and the construction of 20th century housing. The site does not include any designated or non-designated historic assets. It does not convey any of the particular elements of the historic landscape area noted in the summary description. The site is urban fringe and backdropped by modern housing. The local topography prevents readily available views of or from the site towards any of the designated assets within the vicinity, including sight-lines between Deganwy Castle and Bryniau Tower. The following scoring has therefore been applied:

Creuddyn Historic Landscape Area – relative importance

Value	V High/ Good 5	High/ Good 4	Mod/ Med 3	Low 2	V Low/ Poor 1	V High/ Good 5	High/ Good 4	Mod/ Med 3	Low 2	V Low/ Poor 1
Criterion	Whole of historic character area (step a)					Whole of HLA on the register (step b)				
<i>Rarity</i>					0					0
<i>Representative</i>					x					x
<i>Documentation</i>					x					x
<i>Group value</i>					x					x
<i>Survival</i>					x					x
<i>Condition</i>					x					x
<i>Coherence</i>					x					x
<i>Integrity</i>					x					x
<i>Potential</i>					x					x
<i>Amenity</i>					x					x
<i>Associations</i>					0					0
<i>Score:</i>					9					9
	$(9/55) \times 100 = 16$					$(9/55) \times 100 = 16$				

Evaluation of the relative importance in the national context (step c)

Value	V High/ Good 5	High/ Good 4	Mod/ Med 3	Low 2	V Low/ Poor 1
Criterion	Creuddyn Historic Landscape Area				
<i>Rarity</i>					0
<i>Representative</i>					x
<i>Documentation</i>					x
<i>Group value</i>					x
<i>Survival</i>					x
<i>Condition</i>					x
<i>Coherence</i>					x
<i>Integrity</i>					x
<i>Potential</i>					x
<i>Amenity</i>					x
<i>Associations</i>					0
<i>Score:</i>			2	9	
	$(9/55) \times 100 = 16$				

4.4. The average overall value of the affected area is therefore 16, giving an overall value of the site in relation to the registered historic landscape area of **low**.

ASIDOHL2 STAGE 4: GRADES OF OVERALL VALUE

80–100 Very High

60–79 High

40–59 Considerable

20–39 Moderate

5–19 Low

0–4 Very Low

5 Stage Five: Summary of overall significance of impact

5.1. The results of the stages 2, 3, and 4 assessments have been combined, in accordance with the guidance, to provide an overall assessment of the likely effects to the registered historic landscape of the potential inclusion of the site in the local plan as an area of residential development. The professional judgements outlined in the above narrative and the scores set out in the above stage 2-4 tables have informed the overall conclusions of this report. Those conclusions are summarised as follows:

HLCA	Value of historic character area (Stage 4)	Impact of Development (Stage 2 & 3)	Reduction of the value of the historic landscape area on the register
Area 6 Creuddyn PRN 15803	Low The impacted part of the affected historic character area includes limited evidence for the 19 th century enclosure pattern and does not include any other elements of key interest in the character area or elements that convey the particular interest of the historic landscape, the site lacks intervisibility with key sites within the historic character area Score = 2	Very low The proposed development would remove a very small proportion of the HCA and have a very slight urbanising effect on land at the urban fringe and within a significantly modified field pattern Score = 1	Very low The contribution of the affected areas to the overall value of the landscape and the relatively slight degree of change are such that no significant parts of the landscape that particularly convey its value would be impacted. The impact on key elements is such that the change to the value of the registered landscape is negligible and it is essentially unchanged Score = 1
Total score = 4, overall significance of impact Slight			

6 Concluding statement

- 6.1. This assessment concludes that residential development within the site would result in slight (adverse) effect on the Creuddyn Historic Landscape Area within the Creuddyn and Arllechwedd Registered Historic Landscape. In relation to the overall value of the historic landscape area on the register this effect is very low and the key attributes that contribute to the special interest of the area are unchanged.
- 6.2. The site comprises land to the south of Llanrhos and west of Pentywyn Road. The site is currently in use as agricultural land with a field pattern that retains few surviving elements shown on the mid-19th century tithe map and dating to a period of enclosure of mid-19th century date or earlier. That field pattern has been modified by removal of field boundaries and changes to the road pattern as well as the construction of a late 19th century building with 20th century alterations to the south of the site, residential development to the north and a caravan park to the west. The site is to the north of the Bodysgallen Registered Historic Park and Garden and close to grade II listed Ty-n-y-Coed, a house later used as a convalescence home and now part of a large office and research facility. Deganwy Castle and Bryniau Tower (scheduled monuments and grade II* and grade listed) are also within 1km of the site, but the site is not visible from Deganwy Castle and does not lie within the sight line between these assets.
- 6.3. Important elements of the Creuddyn Historic Landscape Area include views from Bryniau Tower, the parkland landscape at Bodysgallen and the scattered farmsteads and limestone walls. None of these are relevant to the site and these attributes would not be impacted. The urban development of Llanrhos to the north is modern and development within the site would be viewed within this context. The farmstead at Maes Dolau is now part of a modern caravan park and retains few historic elements, it is not recorded as a heritage asset by Heneb or RCAHMW.
- 6.4. Consequently an assessment of only slight harm to Creuddyn Historic Landscape Areas and the Creuddyn and Arllechwedd Registered Historic Landscape has been concluded, applying the ASIDOHL assessment technique.

7 References, glossary and abbreviations

Time periods used are as follows:

- Prehistoric:
 - Palaeolithic – c.800,000 – c.12,000 BC
 - Mesolithic – 12,000 BC – 4,000 BC
 - Neolithic - 4,400 BC – 2,300 BC
 - Bronze Age - 2,300 BC – 700 BC
 - Iron Age – 800 BC – AD 48
- Roman: AD 48/74 – 400
- Early medieval: AD 400 – 1066/1070
- Medieval: 1066/1070 – 1540
- Post Medieval: 1540 - 1901
- Modern: 1901 - present

Abbreviations used are as follows:

- GAPS – Heneb, Gwynedd Archaeological Planning Service
- HCA – Historic Character Area
- HER – Historic Environment Record
- LB – Listed Building (LB II – Grade II listed, LB II* - Grade II* listed)
- NDHA – Non-designated historic asset
- SM – Scheduled Monument

Appendix A: Register of Historic Landscapes in Wales

Historic Landscape Characterisation - Creuddyn and Arllechwedd Historical Themes

Agriculture

A distinctive feature of the uplands parts of the study area is the contrast between the meandering walls of earlier enclosures, some of which may be prehistoric or medieval in origin (see area 16), and the straight lines of the walls laid out during the period of estate improvement, for example under the Caerhun Enclosure act of 1858 (see area 9). One of the major historic landscape features of this area is the extensive relict remains of prehistoric fields and settlements, especially in the areas around Pen-y-Gaer hillfort and Maen-y-Bardd. Whilst these have long been known about, detailed survey has not yet taken place and we do not fully understand the ways in which the fields related to the settlements which lie dotted amongst them, the funerary and ritual sites which survive within the fabric of the stone walls and fields, and the routes which cross them.

The process by which the uplands have come to be enclosed has been traced by R. Elwyn Hughes (1939) and, more recently and specifically relating to the parishes of Llanbedr y Cennin and Caerhun, by Dr Della Hooke (1997), who describes successive stages of encroachment on open pasture beginning with seasonal settlement which is documented from the sixteenth century, but probably older in origin, for already by 1468 the upland settlement of Maeneira may have been in permanent occupation. There is documentary evidence for permanent occupation in the uplands and for these the encroachments being walled and fenced.

The tithe maps of a number of parishes (including Llandudno, Eglwys-Rhos, Llangwstenin, Dwygyfylchi and Gyffin) show a hitherto-unsuspected large number of areas of relict (presumably fossilised) strip fields, in lowland areas around farms or scattered settlements which have retained medieval townships in their names. Unfortunately, all of these have since been removed by either settlement development (most notably under Llandudno Junction) or agricultural improvements (Gyffin). Open fields were obviously part of the medieval landscape of the area.

Some smaller areas were enclosed much later; the hillside slopes of the Alltwyllt (area 21) were settled by the 1770s, and by the nineteenth century these tiny houses and their associated plots of land were home to a population made up partly of sulphur miners, partly of paupers on parish relief, stocking-knitters, people who worked on the boats that plied up and down the Conwy

river. The limestone ridge of Bryn Pydew (area 22) similarly was common land which was enclosed in the nineteenth century. Both areas still retain the irregular, small field patterning which testifies to these events.

The mid-nineteenth century enclosure awaits its historian. The Newborough estate letters record the hostility that the apportionment aroused, with local farmers demolishing the walls at night, and policemen carrying guns.

Relict archaeology

The area has a rich variety of well-preserved and significant archaeological monuments demonstrating in its historical depth the development of the landscape from the earliest times to the present. Some landscape areas (e.g. Great Orme (area 1); enclosed uplands (area 9), enclosed intermediary hillslopes (area 16)), have particularly extensive and important sequences of relict remains.

The Great Orme (area 1) has a sequence beginning with Kendrick's Cave, with its Upper Palaeolithic deposits, the Neolithic burial chamber of Llety'r Filiast, bronze age cairns and extensive underground copper mines which are among the earliest in Europe, as well as late prehistoric settlement, including a major hillfort (Pen y Dinas). The Little Orme (area 3) also has significant Upper Palaeolithic sites, including Pant y Wennol cave.

In addition to the Bronze Age copper mining on the Orme, prehistoric industry has left its mark on the area in the form of a Neolithic axe factory at Graiglwyd, remains of which are to be found around the margins of the present quarry (area 24). The rough-outs from this 'factory' have been found as far afield as southern Britain, Scotland and Ireland. The location of this resource may, in part at least, account for the concentration of funerary and ritual monuments around Druid's Circle, where a complex of sites (including cairns of various forms, stone circles, cists, standing stones and so on) has been described as one of the most important in western Britain.

Further south, the south-facing slopes from Bwlch y Ddeufaen to Craig Celynin (area 9) contain several Neolithic and bronze age funerary and ritual monuments, including the cairns and standing stones in Bwlch y Ddeufaen, Barclogiad y Gawres cairn, Cerrig Pryfaid stone circle and the Maen y Bardd burial chamber.

The area contains a significant concentration of major late prehistoric hillforts, including Pen y Dinas (the only hillfort with a cheveau de frise in north Wales) and Castell Caer Lleion (with its smaller citadel, possibly a Dark Age refortification). It also

formerly contained the fort of Braich y Ddinas, now quarried away (area 11). Perhaps more significant are the extensive remains of prehistoric fields systems and settlements, some of the most important such survivals in Britain: for example, around Maen y Bardd (area 9) is an area over 100ha in extent containing relic, late prehistoric hut circles, hut groups, enclosures, field walls, cultivation banks and terraces and internal trackways. Medieval 'long huts' are also a feature of the archaeology of this area. It is possible that these might have their origins in the Neolithic period, as the burial chamber at Maen y Bardd is so obviously incorporated into one of the field walls.

Evidence of prehistoric settlement, in the form of huts circles, burnt mounds, elliptical enclosures and curvilinear field walls, has survived in an almost unbroken pattern across the uplands (area 24) from the Conwy valley to Anafon in the west (beyond the limits of the study area). However, another notable concentration is to be found in an area centred on Pen y Gaer hillfort where there are concentrations of hut circles and long huts, often associated with field systems. Like Maen y Bardd, these are overlain in parts by enclosures and settlements of the 16th and 17th centuries, and by Parliamentary enclosures of the 19th century, which all add to the considerable historical depth of these upland landscapes.

Many of the trackways in the area are presumed to have prehistoric origins, most notably the one which runs over Bwlch y Ddeufaen (area 9), from Conwy valley to the coastal plain, which was used by the Romans and remained, until the 18th century, the only way of avoiding the treacherous coast around Penmaenmawr.

Known monuments from the Roman period in the area are restricted to the fort (and ancillary vicus settlement which covers several hectares around it) on the west bank of the river at Caerhun, and the road which leads over Bwlch y Ddeufaen. The fort lies below the hillfort of Pen y Gaer, and south of the motte at Tal y Cafn, and the shift of centres of power across the centuries is a possible fruitful area of future study (the location of the early llys at either Castell or Gronant is a further factor).

Arguably the most significant monument from the medieval period is the castle and bastide town of Conwy, built by Edward I between 1283-6) on the site of an earlier Cistercian monastery, as one of a series in his conquest of north Wales. However, much more of the medieval landscape remains preserved, especially in the upland and marginal areas on the west side of the Conwy valley (areas 9, 16 and 24), as well as on the Great Orme (area 1), where numbers of platform houses and long huts testify to the ebb and flow of human settlement over centuries. This aspect of the archaeology of the area is amplified below in the section on settlement.

Further north, Deganwy (area 6) played an important role in Welsh history throughout the post-Roman period, controlling the mouth of the river before the arrival of Edward. Tradition makes it the llys of Maelgwn Gwynedd, and it is mentioned as Arx Decantorum in AD 822, with a castle being built around 1080 by Robert of Rhuddlan, before it was passed to Llywelyn Fawr in 1200. In the 13th century, Gogarth Grange, a palace of the bishops of Bangor, was built on the south side of the Orme (area 1), and the area contains a number of medieval churches including St. Tudno's (area 3) and Llangelynnin (area 16).

Settlement

The variety of landscapes within the study area is reflected in the different patterns of existing settlement. The basis of some of the present towns, villages, hamlets and isolated farms of Creuddyn and Arllechwedd were in some cases already in existence when limited written records begin in the twelfth century, but their growth, change, and in some cases abandonment, also reflect the change in agricultural practices in later periods, whereas others evolved or were created anew according to the demands of the Industrial economy of the nineteenth and twentieth centuries.

The Conwy river is the most significant element of the natural landscape. Flowing south to north, its mouth is guarded by the Edwardian castle and planted town of Conwy. This formed the only urban nuclei in the area before the nineteenth century, though many of the smaller settlements which still survive are already evident in medieval documentation, starting with the 1352 Record of Caernarvon.

The pattern of administration as it had evolved in Gwynedd by the thirteenth century involved territorial divisions into cantrefi (hundreds), subdivided into commotes, in Welsh cymydau. Deganwy came to be the commotral centre for Creuddyn, which lay within the cantref of Rhos; Abergwyngregyn, just beyond the western part of the study area, formed the commotral centre for Arllechwedd Uchaf, the north-eastern part of which lies within the study area, and Arllechwedd Isaf would also have had its own commotral centre, possibly at Castell on the eastern bank of the Conwy near the shallow crossing at Tal y Cafn.

As well as its llys and maerdref, each commote contained a number of townships, trefi in Welsh, villae in the Latin documents, which might be either bond or free, and tribal or extended family holdings might extend through several townships. Within Arllechwedd Uchaf, the townships of Bodsilin, Gorddinog, Llanfair and Dwygyfylchi fall into the study area, as well as the parish churches of Aber, Llanfair and Dwygyfylchi. The commote of Arllechwedd Isaf comprised four bond villi and one free villi, each with its own fixed boundaries. The bond villi were situated in the north of the commote, at Llechan, Eirianws, Tremorfa, and Glyn

and Gronant. The free vill of Castell was the most extensive, being subdivided into the hamlets of Penfro, Merchlyn, and, separated from the others by the bond vills, Cymryd and Bodidda.

Arllechwedd Isaf also included three ecclesiastical vills or townships; Aberconwy was given to the Cistercian order by Llywelyn Fawr, and later made into the borough lands of Conwy by Edward I; the others were Gwrhydros, which lay next to Aberconwy, and the vill of Ardd a Dar Lâs, in the far south. Granted to the Cistercians by Llywelyn Fawr, it formed one substantial land-holding, effectively an estate in much the same sense as the gentry estates of the modern period, initially worked directly by the monks as a grange, later leased out to tenant-farmers (Hays 1963).

The survival of a remarkable document, the Bolde rental of the period 1420 to 1453, has enabled a partial reconstruction of the way in which the Welsh land-tenure systems in this commote were replaced by holdings which were to form the basis of the great estates which dominated the region from the sixteenth century into the nineteenth.

Within the commote of Creuddyn, the manor of Gogarth was amongst the lands sequestered by the English crown in 1277 and presented to the see of Bangor, who only relinquished ownership in 1891; this comprised three townships, Gogarth, Cyngreawdr and yr Wyddfid. Other townships were Penlasog, Bodafon, Rhiwledin, Penrhyn, Gloddaith, Bodysgallen, TrefwARTH and Llanwyddan, and the area was divided between the parishes of Llandudno, Eglwys Rhos and Llangystennin.

As well as the secular land-divisions, by the later medieval period Arllechwedd Isaf was divided into the parishes of Gyffin, Llangelyn, Caerhun and Llanbedr y Cennin, the last of which also came to include the township of Ardd a Dar Lâs after the dissolution. Conwy became a parish when the monastery was removed to Maenan after the Conquest.

The topography of the study-area, which varies from both low-lying meadowland and pasture to bleak sheepwalks, has led historically to a varied agriculture characterised by farms which are often made up of both upland and lowland holdings, though within this pattern there are considerable variations from place to place and within time. The lowland hendrefi of the Conwy valley are apparent as well-built farmhouses, such as Farchwel, often reconstructed in the nineteenth century, as at Maes y Castell, Llwydfaen and Gorswen, and elsewhere names such as Hendy or Hendre Fawr indicate the former presence of medieval settlement. Isolated upland settlements have functioned variously as seasonal dwellings connected to these lowland holdings and as permanent farm-houses

A number of isolated farmhouses stand on the sites of what were once dispersed settlements; the farmhouse at Ardd in Dolgarrog is now abandoned, but the farm itself contains a number of ruined dwellings of possibly late seventeenth or early eighteenth century date, and the area itself formed one of the most prosperous granges of Aberconwy Abbey (RCAHMW 1956, p75-6, UWB Bangor Ms 2383, Hays 1963).

Along the coastal strip between Dwygyfylchi and Llanfairfechan, houses of sixteenth and century date survive, though the topography of the area is different from the Conwy valley, being situated on a far narrower lowland strip, at the foot of precipitous hillsides leading up to sheepwalks. Sources such as Lewis Morris' map of 1748 (Morris 1748) show these as the isolated dwellings of yeoman farmers, but their situation has been changed by the pace of development in the nineteenth and twentieth centuries.

Industrialisation brought about changes in the settlement pattern of the whole area. While in a number of places - Penmaenmawr, Llandudno Junction, Dolgarrog - significant nucleated settlements arose, the patchy nature of development elsewhere meant that some isolated dwellings housed incoming quarrymen and miners. A row of cottages at Trecastell appear to have been built for miners.

The census from 1841 to 1871 reveal that many farms accommodated a miner or a quarryman, whether a lodger or one of the sons, and possibly the existence of a dual economy enabled some of these settlements to survive a little longer than otherwise they might. Certainly, by the end of the nineteenth century the farmhouses themselves were becoming deserted, and the lands reverting to upland holdings for farms in the valley itself. The development of water-catchment schemes in the twentieth century did something to arrest the depopulation of the uplands in Dolgarrog, Llanbedr and Caerhun, and by the 1970s some of these farms were being run on a part-time basis by families where the husband also worked in the aluminium works.

The social changes brought about by the coming of the railway substantially altered the nature of lowland settlement. Apart from the development of the area between Llanfairfechan and Dwygyfylchi as tourist settlements, the area's proximity to Manchester and Liverpool brought in a number of wealthy businessmen who set themselves up in the area.

A number of dispersed settlements, without any infrastructure, survive within the study area. One of these is on the Alltwyllt, above Dolgarrog, legendarily supposed to have been founded by surviving members of the Gwylliaid Cochion Mawddwy in the sixteenth century, whose descendants practised a garden type of agriculture, keeping cows on the common, mining and fishing

(Hughes 1940, 24).

Nucleated village settlements dating from at least the Medieval period survive at a number of locations. The village of Bryn Pydew is situated on the central part of the limestone ridge that forms area 22. A settlement here is visible on the tithe map of 1839, centred around cross roads, and has since extended to include a linear development along the road to Llandudno Junction at Esgyrynn. The present village includes a post office and a chapel. Glanwydden is a small village situated between the Pydew ridge and the Little Orme, and includes a chapel and a public house. The village of Llanbedr y Cennin is centred on St Peter's Church, and includes a pub, a chapel and a shop. Ro Wen is a linear development alongside a road which may be Prehistoric in origin, leading from Tal y Cafn to Bwlch y Ddeufaen and Aber. The village is dignified by a number of chapels, public houses, a school, post office and shops.

The town of Conwy represents the oldest nucleated urban settlement in the study area, and has been described as an outstanding example of the planted town, which typically embodies the most recent thinking on urban planning at the time of its construction, and thereafter fossilises. In 1292, Edward I chose it as the place to build his new borough town, designed to plant an English settlement in Gwynedd and thereby subdue a potentially lawless population.

Llanfairfechan contains a considerable number of dwellings by Herbert Luck North (1871-1941), an outstanding locally-based Arts-and-Crafts architect (Hughes 1989). Penmaenmawr is one of the classic industrial towns of North Wales, but was also developed as a tourist resort. The construction of Sylvester's road around the bluff of Penmaenmawr may have had the effect of causing one of the major landholdings in the area to change hands, and the community of Penmaenmawr is almost entirely a creation of the Victorian age, and reflects not only the development of the quarrying industry, but also the attempts to develop it as a tourist resort.

A sign of the impending change in the Creuddyn peninsula in the early nineteenth century was the draining of the land at the base of the Orme to create the modern resort of Llandudno (area 2). The enclosure act of 1843, implemented in 1847, apportioned 832 acres out of 955 acres of parish common to Edward Mostyn of Gloddaeth, who resolved upon the creation of a seaside resort. Henceforth Llandudno's future lay not with mining or agriculture but with holidaymakers.

The terrain immediately to the east of the Conwy lent itself to the creation of a junction station between the main Chester to Holyhead line and the important double-track branch to Llandudno, as well as the later branch line up the Conwy valley. The

station here was opened in 1860, and was upgraded around 1883 and again in 1897 (Anderson and Fox 1984). Housing is already evident in photographs taken pre-1897 (see front cover), but the expansion of Llandudno Junction as a settlement only came in the twentieth century.

Only one study has explicitly analysed place-name evidence within the study area, by Ifor E. Davies in 1984 (Davies 1984, 125-127), though place-names are treated as evidence in a number of other studies (Hughes 1940, Hooke 1997, Jones Pierce 1939, Withers 1995).

Industrial

From prehistoric times the area has been extensively worked for minerals and has been an important transport focus. Archaeological evidence exists for industrial activity as early as the third millennium BC, when Graiglywd was worked for stone suitable for axe-making. It was the third most productive of the prehistoric axe-making sites in Britain, after the factories of Great Langdale and Scafell in the Lake District and around St Ives in Cornwall, whose products vied with each other in Neolithic markets throughout the island (Cummins and Clough 1988).

Copper was extensively mined on Creuddyn in the Bronze Age, a fact first recognised in 1831 and 1849 with the discovery of stone and bone tools in the Great Orme copper mines (area 1) (Stanley 1850). The possible calibrated age-ranges for sample materials are 1410 BC to 1070 (Ambers 1990). The mines were exploited in horizontal galleries up to 50m in length and at vertical depths of approximately 30m in which firesetting had been used to extend the workings (Dutton 1994). The Great Orme mines were a major supplier of copper ore in prehistory, along with Mynydd Parys, Cwmystwyth and a number of other sites elsewhere in Britain and beyond.

The mines themselves were revived in 1692, and continued working until 1877, latterly on a very small scale, as Llandudno was already developed as a tourist resort. They were equipped with steam and hydraulic prime movers to operate the pumps, and the trace of the long flatrod system (jointed wooden rods) which connected a water-engine at Ffynnon Gogarth with pumps at the Old Mine, remain one of the most distinctive landscape features of the Orme (Williams 1995).

Lead was extensively worked at Trecastell Mine, near Henryd (area 16). A Prehistoric origin has also been suggested for this site, but not until 1753 is there documentary evidence for mining in the area. Trecastell remained at work as late as 1955, but the site was landscaped after closure, and little landscape evidence remains (Bennett 1997). There are iron trial workings above Aber,

Gorddinog mine and elsewhere.

Smaller and shorter-lived ventures were the Arddu sulphide mine on the uplands (area 9) above Dolgarrog, operational from 1853 to 1864, connected to the main road by a contour railway and two counter-balanced inclines, as well as other unsuccessful trials at a number of other locations.

Quarrying for stone and slate has taken place at a number of locations within the study area. The modern workings in the igneous rocks of Penmaenmawr (area 11) are of considerable size. Modern exploitation was under way in the 1820s, when suitable material was worked from the unconsolidated scree slopes, flaked into setts, and transported by ship to Liverpool. Within a decade two independent quarries had been developed, one on the Eastern flank (Graiglwyd) and the other occupying the western extremity (Penmaen). Both quarries initially concentrated on sett production, though as loose stone for railway ballast became increasingly important from the 1890s, crushing mills were established. The two quarries were amalgamated under the same management in the early part of this century and the joint operations linked by a quarry railway. In the late 1930s the Graiglwyd quarry ceased producing setts and was abandoned (Davies 1974). The present quarry at Penmaenmawr occupies the western part of the outcrop and concentrates on producing aggregate for road construction and railway ballast. A new crushing plant was installed in 1983 and the present output of the quarry is 600 000 tonnes per annum..

The extensive workings of both the old and the modern quarry contain abundant industrial relics that document past phases of development. The installation of a conveyor system from the Penmaen quarry to the coast during the 1950s also made redundant a whole system of major inclines and as a consequence of recent landscaping a number of installations, such as the large Penmarien crushing plant, were dismantled (Lee 1994).

Less commercially successful was the sett quarry on the northern slopes of Conwy Mountain (area 9), operational by 1874 until the Second World War. In the quarry's early days the stone was shipped from a pier on the Morfa (area 9), later replaced by exchange sidings with the London and North Western Railway (Bradley 1992, 226-7). This site was equipped with inclines, whose traces are evident. The dyorite which makes up the mountain had earlier been quarried for millstones, at a time when the Revolutionary and Napoleonic wars had prevented imports from La Ferté sous Jouarre in France. A number of separate quarry faces have been identified, but the industry does not seem to have been developed locally on any great scale.

On the Little Orme (area 3), limestone was quarried from before 1862 until 1931, shipping directly from a pier below the quarry

(Bradley 1992, 299-300). Limestone has been worked on a number of sites on the Great Orme, such as at the Bishop's Quarry, as well as at around the Marine Drive, where the remains of a chute to load vessels survive, and below Pen y Ddinas, where the rock has been extracted from a pillar-and-stall underground working.

Slate and slate-tuffite have been worked commercially at six quarries within the area, though small-scale trials and quarries of convenience were opened at a considerable number of other locations. The tiny Tal y Fan quarry (area 9) appears to have been worked intermittently from at least 1555 to 1913. Another early site is at Llechan, known to have been exploited in 1686, but probably of medieval origin, since the name (Llechan = 'fissile stone') is attested in the fourteenth century (Ellis 1838). Operations certainly went on here until the late eighteenth century, attested in the characteristically small slates from Llechan quarry at Melin Gwenddar, on which there is a date-stone of 1783.

More conventional in their fortunes were the two quarries in the uplands to the west of Llyn Eigiau (area 9), Cwm Eigiau and Cedryn. Both were opened in the 1820s, and worked on a small scale until the 1850s, when a mill driven by a water-wheel and a barracks were erected at Cwm Eigiau. In the boom years of the 1860s both quarries were equipped with state-of-the-art machinery and a seven-mile-long railway was constructed to give access to the Conwy. Neither one was worked after 1874.

In the valley to the north, a small slate quarry was opened in the 1860s, equipped with a water-driven mill in 1869-1870, and later went over to exploiting a hone-stone vein. This remained in use until 1908. A tiny quarry was also worked in Coed Dolgarrog (area 19) from the 1820s to the 1880s. At Melynlllyn (area 20) a vein of slate tuffite was quarried to make hone-stones from the 1860s to 1910 (Davies 1976).

The area's rich arable land required, and its topography made possible, a number of water-powered corn mills. These are known to have been built on the Gyffin, the Ro, at Llanfairfechan and at Aber. A number of examples survive, converted to dwellings, including the seventeenth century Melin Bulkeley. Other water-driven mills have left less trace, though a pandy was in existence at Dolgarrog by the sixteenth century (NLW Wynnstay MSS.), and a paper mill was established on the Porth Llwyd in 1810 (UWB Baron Hill MSS.). Only foundations are visible of the two windmills known to have been constructed on the Creuddyn peninsula, one on the Orme itself (area 1), the other above Deganwy (area 6).

Water-power was also a vital component of the major modern industrial development of the area, the aluminium works at Dolgarrog. This was established in 1907 as a reduction works for the conversion of alumina and bauxite to aluminium, a process

which consumes vast amounts of electricity, and which has therefore always been established where there is abundant water, rather than near the sources of the raw material. The works was subsequently developed to include a carbon factory and a rolling mill., and now functions as a specialist rolling plant. A purpose-built village was established at Dolgarrog between 1907 and 1926 (Jones and Gwyn 1989).

An early gas works at Madryn Farm supplied Llanfairfechan.

Communications

The archaeology of communications forms an important component of the historic landscape of the study area. A prehistoric route from east to west crossed the Conwy at the ford of Tal y Cafn and passed through Bwlch y Ddeufaen. The Roman road from Canovium (Caerhun) westwards to Segontium (Caernarfon) follows the same route as its purported bronze age predecessor from Ro Wen to Bwlch y Ddeufaen. Near the east end of Bwlch y Ddeufaen a Roman milestone was discovered in 1954 which is attributed to the reign of Constantine the Great (305-337 AD). It records a distance of five miles from Canovium.

From Bwlch y Ddeufaen it is uncertain whether the road continued west through the Anafon and Aber Valleys or descended directly to Llanfairfechan along the Gorddinog valley. The latter route is more likely, since three Roman milestones have been found near its likely course. Two were discovered on separate occasions in 1883, lying within a few metres of each other in a field on Rhiwgoch farm. One is dated to the reign of Hadrian (AD 117-138) and records a distance of eight miles from Canovium; the other dates from the reign of the Emperor Severus (193-211 AD) and does not record any set mileage since the inscription is incomplete. Finally, a third milestone was recovered from a field on Madryn Farm in 1959 on the coastal plain due west of Llanfairfechan. It carried post-Roman as well as an imperial inscription, the latter ascribing it to the reign of Postumus (258-268 AD) (Jones 1985). A possible Roman dock has been identified on the banks of the Conwy immediately north of the fort at Caerhun (area 15), whence a further Roman road ran south to Caer Llugwy and ultimately to South Wales .

The Conwy itself formed a communications artery, carrying timber, lead, iron sulphide and slate from the upper reaches of the valley, from at least the Conquest, although until the early nineteenth century loads had to be transhipped across a reef at Tal y Cafn (Williams 1979). The Caerhun tithe map shows a jetty at this point with road access. From the 1820s to 1864 slate was shipped from Cwm Eigiau at a wharf on the west bank of the Conwy slightly to the north, and for a while in the mid-century Cwm Machno quarry also exported slate from a wharf on the opposite bank. The wharf facilities at Conwy, medieval in origin,

were extended by W.A. Provis in 1831 (CRO XB2/16; Davidson 1997, 4-5), and quays were also built by the London and North Western Railway at Llandudno Junction and at Deganwy.

The river also carried agricultural material; in the early nineteenth century one farmer near Tal y Cafn constructed canals across the alluvial plain to carry lime to his fields; no trace of these has been observed. As with other tidal rivers and estuaries in North-west Wales, mineral traffic declined from the 1860s, and ceased altogether in 1878, only to be revived after the establishment of the aluminium works at Dolgarrog in 1907. A canal and a tramway connected the works to the river, and barges continued to ply the river until the 1930s. Steamer trips from Conwy to Trefriw were introduced on the river in 1847, and continued until 1940.

The river also formed a natural barrier to east-west travel, though ferries are recorded at Conwy from 1188 and Tal y Cafn from 1301 (Davies 1966, 1, 11). The Bwlch y Ddeufaen route remained in common use until the eighteenth century, when in 1769 both the London and the Dublin parliaments made substantial investment in a road over the headland at Penmaenmawr, previously a notorious obstacle to travel – until well within living memory, people in the Conwy valley would refer to 'Penmaenmawr a'r gwledydd pell' – 'Penmaenmawr and the distant lands beyond'. A road of sorts existed here in the time of Charles I, but it was not until the construction of Telford's road in the 1820s that it ceased to be a perilous undertaking to travel from Conwy west. Telford's road was itself replaced by a new road constructed by Boswell of Wolverhampton between 1930 and 1936, which was the first to tunnel through the rock. This road is carried on substantial arched embankments; additional lanes and a further tunnel were constructed in the 1980s.

The creation of the Telford post road in the 1820s led to the building of a suspension bridge over the mouth of the river, after various proposals for stone bridges proved abortive, Telford's Conwy bridge spans 327' between its two ashlar towers. Plans to demolish it in 1958 led to an outcry. It has recently been renovated to near-original condition, and is still in use as a footbridge.

The construction of the post road and the bridge formed part of a general improvement of the local road system. The Conwy to Pwllheli road was taken over by a turnpike trust, and the Conwy to Tal y Cafn length by the new Caernarvonshire Trust, and the new road was complete by 1772 (Davies 1966, 203).

The second bridge to be built at Conwy was built for the Chester and Holyhead Railway in 1848, one of Robert Stephenson's two tubular bridges. Only at Conwy are the two tubes still intact and carrying trains. Its castellated arches were intended to blend in with the castle. The railway was designed to connect London with the main port for Ireland, and was opened all the way

through in 1850); in 1857 the first water-troughs were installed at Mochdre, later moved to Aber, making non-stop locomotive running a possibility (Cragg 1997, 13-17). At Penmaenmawr, the railway is carried on an open viaduct 182 yards long.

A branch was constructed to Llandudno in 1858, and the line was doubled after 1875 (Bradley 1992, 90.). Another branch opened to Llanrwst in 1863, subsequently extended to Betws y Coed (1866) and Blaenau Ffestiniog (1878). Rail-connected quays were built at Ynys (near the Stephenson bridge) and at Deganwy. These developments made the junction station into an important railway centre, around which a community began to grow in the late nineteenth century.

The river is bridged at two other locations within the study area, at Tal y Cafn, opened in 1897 (CRO X/RD/?; Davies 1966, 229), a road bridge which replaced the ferry, and at Dolgarrog in 1916, when a roadway and a siding were constructed from the branch line to the aluminium works. This bridge is one of two in the United Kingdom, with the Forth bridge, to use a cantilever girder construction.

Culture, society and language.

Traditional evaluations of the Welsh landscape have tended to see a polarisation into industrial and rural types, each with its strong sense of identity, each distinctively Welsh in outlook, and frequently in language also. Though the landscape of the present study area is predominantly rural, traditional in outlook and Welsh in speech, much of the population nevertheless has no long-standing roots in the area, and the common language for most of the larger communities is English.

The town of Conwy, founded by Edward I, was traditionally an English-speaking enclave in a Welsh-speaking area, which has only recently started to lose this character. Industrial and tourist developments of the nineteenth and twentieth centuries have also altered the linguistic and cultural complexion of the area considerably.

Llandudno has typically catered for holidaymakers from the north-west of England, and ease of transport along the North Wales coast road has resulted in the whole of Creuddyn and to some extent the Penmaenmawr-Dwygyfylchi area effectively serving and forming part of, an extended Anglicised or English conurbation.

Though the language of the granite quarries at Penmaenmawr was always commonly Welsh, some of the workmen and under-managers came from quarries elsewhere in the world, unlike the neighbouring slate quarries which drew their workers almost exclusively from the Welsh-speaking hinterland.

The aluminium works at Dolgarrog contained a strange ethnic mix in its hey-day in the 1920s, when English, Scots, Irish and others worked alongside native Welshmen and Welshwomen - but as in the case of Conwy, this community is now becoming more Welsh in speech rather than less.

The study area is not, therefore, exclusively the cradle of a traditional Welsh society: the sense of bro remains strong for many, and local eisteddfodau remain popular and well-supported, but for others loyalties and attachments to the area will be founded on a different set of values and assumptions.
